

CLAIMS

I claim:

1. A configurable driveshaft assembly comprising:
a male component; and
a female component in engagement with said male component, said female component comprising a configurable segment between a female yoke and a receptacle member.
2. The configurable driveshaft assembly as recited in claim 1 wherein said configurable segment has a predetermined length dimension, said predetermined length selected to correspond to an overall length dimension of a vehicle driveshaft.
3. The configurable driveshaft assembly as recited in claim 1 wherein said configurable segment is tubular.
4. The configurable driveshaft assembly as recited in claim 1 wherein said configurable segment comprises a beveled edge.
5. The configurable driveshaft assembly as recited in claim 1 wherein said configurable segment is a rolled tube.

6. A drivetrain assembly comprising:

a first axle;

an interaxle driveshaft connected to said first axle, said interaxle driveshaft comprising a configurable segment between a female yoke and a receptacle member; and

a second axle connected to said interaxle driveshaft.
7. The drivetrain assembly as recited in claim 6 wherein said configurable segment has a predetermined length dimension, said predetermined length selected to correspond to a length dimension of a vehicle interaxle driveshaft.
8. The drivetrain assembly as recited in claim 6 wherein said configurable segment is tubular.
9. The drivetrain assembly as recited in claim 6 wherein said configurable segment has at least one beveled edge.
10. The drivetrain assembly as recited in claim 6 wherein said configurable segment is a rolled tube.

11. A drivetrain assembly comprising:

a transmission;

a forward driveshaft connected to said transmission, said forward driveshaft comprising a configurable segment between a female yoke and a receptacle member; and

an axle connected to said forward driveshaft.
12. The drivetrain assembly as recited in claim 11 wherein said configurable segment has a predetermined length dimension, said predetermined length selected to correspond to a length dimension of a vehicle forward driveshaft.
13. The drivetrain assembly as recited in claim 11 wherein said configurable segment is tubular.
14. The drivetrain assembly as recited in claim 11 wherein said configurable segment has at least one beveled edge.
15. The drivetrain assembly as recited in claim 11 wherein said configurable segment is a rolled tube.
